# FEATURES

- Automatic noise filtering of printer sensor data
- Support for desktop & mobile, so that the site can be used on the go

- Visualisations of printer media levels & their history

- Visualisations of predicted media levels

- Route planning to plan an optimal route to refill printers within a given time window

ROUTE PLANNING

The PaperFactory system identifies those printers that most urgently need refilling based on projected consumption versus current media levels.

PRINTER MONITORING & PREDICTION

The PaperFactory systems collects printer media (Paper/Toner/Ink) data gathered via SNMP and presents it in an easy to use user interface, allowing you to analyse usage patterns and identify printers needing refillings.
